

# NATIONAL TECHNICAL ASSESSMENT ITB-KOT-2023/2586 rev. 1

This National Technical Assessment has been issued in accordance with the Regulation of the Minister of Infrastructure and Construction of 17 November 2016 on National Technical Assessments (Journal of Laws of 2016, Item 1968) by the Building Research Institute in Warsaw, at the request of:

**SIKLA GmbH**  
**In der Lache 17, 78056 VS Schwenningen, Germany**  
**SIKLA Polska Sp. z o.o.**  
**ul. Spółdzielcza 55, 58-500 Jelenia Góra**

National Technical Assessment ITB-KOT-2019/0808 Rev. 1 is a positive assessment of the performance of the following construction products for their intended use:

## **SIKLA system components for fixing of ducts and installations**

Date of validity of the National Technical Assessment:

**29th of December 2028**

DIRECTOR

of the Building Institute  
*Robert Geryło*  
*D.Eng.*

*Stamp of ITB*

Warsaw, 29th of December 2023

**Building Research Institute**  
**ul. Filtrowa 1, 00-611 Warsaw**  
**tel.: 22 825 04 71; NIP: 525 000 93 58; KRS: 0000158785**

## 1. Technical description of the product

The subject of this National Technical Assessment are the components of the SIKLA pipe support system. The products covered by the National Technical Assessment are manufactured by SIKLA GmbH, In der Lache 17, 78056 VS Schwenningen, Germany, at its production plant in Germany.

The authorised representative of the manufacturer in Poland is SIKLA Polska Sp. z o.o., ul. Spółdzielcza 55, 58-500 Jelenia Góra.

The National Technical Assessment shall cover the product types specified by the manufacturer and derived from the performance characteristics given in section 3 and the combination of materials and components. The National Technical Assessment covers the following products:

- adapter NT CC 41 DIN3015, (fig. A1),
- adapter NT CC 41 DIN3015 VA, (fig. A1),
- channel connector SK, (fig. A2),
- channel connector SK HCP, (fig. A2),
- fixing bracket MW 90° W Stabil VA, (fig. A3),
- block set PBS CC 27, (fig. A4),
- corner bracket EW 41-1, (fig. A5),
- corner bracket EW 41-1 HCP, (fig. A5),
- angle connector EV CC 41-1, (fig. A6),
- angle connector EV CC 41-1 HCP, (fig. A6),
- angle connector EV CC 41-2, (fig. A7),
- angle connector EV CC 41-2 W, (fig. A7),
- angle connector EV CC 41-2 HCP, (fig. A7),
- angle connector EV CC 41-2 W HCP, (fig. A7),
- angle connector EV CC 41-3, (fig. A8),
- angle connector EV CC 41-3 HCP, (fig. A8),
- angle connector EV CC 41-4, (fig. A9),
- angle connector EV CC 41-4 HCP, (fig. A9),
- angle connector EV CC 41-5, (fig. A10),
- angle connector EV CC 41-5 HCP, (fig. A10),
- fixing bracket MW LL, (fig. A11),
- pipe clamps Stabil D-1/2", (fig. A12),
- pipe clamps Stabil D-1/2" with lining, (fig. A13),
- pipe clamps Stabil D-3G HCP, (fig. A14),
- pipe clamps Stabil D-3G Silicon, (fig. A15),
- pipe clamps Stabil D-A, (fig. A16),
- pipe clamps SRS VA, (fig. A17),
- pipe clamps SRS VA with lining, (fig. A18),
- chilled water clamp AKS 13, AKS 19 i AKS 25, (fig. A19),
- fixed point clamps FS, (fig. A20)
- pipe loops RSL N VA, (fig. A21),

- pipe loops RSL N Silicon, (fig. A22),
- U-bolt support UBF, (fig. A23),
- insulated foot plates SHB HCP, (fig. A24),
- insulated foot plates SHB SQF-L, (fig. A25),
- mounting plate GPL Siaqua, (fig. A26),
- twin holder DHP M8, (fig. A27),
- web plate KNO, (fig. A28),
- beam clamp TCS 41, (fig. A29),
- beam clamp TCS 41 HCP, (fig. A29),
- support joint SG, (fig. A30),
- joint JOI 41 R, (fig. A31),
- joint JOI 41 S, (fig. A32),
- joint JOI 41 HCP, (fig. A33),
- support cone SMD 1, (fig. A34),
- sound absorption units SDE, (fig. A35),
- sound absorption element GMT M8, (fig. A36),
- support bracket WK CC 100/100-40, (fig. A37),
- support bracket WK CC 150/150, (fig. A37),
- tie rod STR, STR VA i STR HCP, (fig. A38),
- cantilever brackets AK CC, (fig. A39),
- channel holder MOF 27, (fig. A40),
- T-bracket MOS 27, (fig. A41),
- eye bolt SCR, (fig. A42),
- eye socket SCB VA, (fig. A43),
- threaded clevis GWB, (fig. A44),
- rod coupling AD IG/IG VA, (fig. A45),
- rod coupling AD AG/IG, (fig. A46),
- ducting angle LUW F, (fig. A47),
- ducting angle LUW, (fig. A48),
- ducting angle LUW A, (fig. A49),
- ducting angle LUW Stabil, (fig. A50),
- ducting bracket LCO, (fig. A51),
- ducting clamps PLU 2G-N, (fig. A52),
- ducting clamps PLU from DN 560, (fig. A53),
- ducting clamps PLU 1G with lining, (fig. A54),
- ducting clamps PLU 2G-N with lining, (fig. A55),
- ducting clamps PLU from DN 560 with lining, (fig. A56),
- ducting clamps PLU TOP 2G with lining, (fig. 57),
- perforated tape BND, (fig. A58),
- ducting strap LUB, (fig. A59),

The dimensions of the SIKLA system components are given in Annex A. The dimensional tolerances of the elements correspond to tolerance class m according to PN-ISO 965-2:2001. Deviations of the remaining dimensions of components covered by this National Technical Assessment correspond to tolerance class *m* according to PN-EN 22768-1:1999 standard.

The materials of which the SIKLA system components are made are given in Annex B, Table B1. SIKLA system components are used with the supplementary accessories shown in Annex D (fig. D1-D11).

## **2. Intended use of the product**

The SIKLA system components are designed for suspension of pipes in accordance with the performance characteristics specified in section 3.

The design load capacity of SIKLA system components are given in Annex C.

For corrosion protection reasons, SIKLA fastening system components made of aluminium grade EN AW-1060 according to standard PN-EN 573-3+A1:2022, STAN H24 according to standard PN-EN 515:2017 can be used in corrosion conditions cat. C1, C2 and C3 according to standard PN-EN ISO 9223:2012.

For corrosion protection reasons, SIKLA fastening system components made of steel with zinc coating should be used according to standard PN-EN ISO 14713-1:2017 and PN-EN ISO 9223:2012

Components of Sikla system made of stainless steel should be used according to Annex A of standard PN-EN 1993-1-4:2007+NA:2010+A1:2015:2021, in corrosive environments:

- C1 ÷ C3 acc. PN-EN ISO 9223:2012 – for stainless steel grade 1.4310 acc. PN-EN 10088-1:2014,
- C1 ÷ C4 acc. PN-EN ISO 9223:2012 – for stainless steel A4 acc. PN-EN ISO 3506:2020 and for stainless steel 1.4404 and 1.4571 acc. PN-EN 10088-1:2014,
- C1 ÷ C5 acc. PN-EN ISO 9223:2012 – for stainless steel 1.4529 acc. PN-EN 10088-1:2014.

The products covered by this National Technical Assessment shall be used in accordance with a technical design developed taking into account:

- Polish standards and technical and construction regulations, in particular the Regulation of the Minister of Infrastructure of 12 April 2002 on technical conditions to be met by buildings and their location (Journal of Laws of 2022, Item 1225),
- the provisions of this National Technical Assessment of Building Research Institute,
- the recommendations contained in the technical manual drawn up by the manufacturer and supplied to the recipients.

### 3. The performance of the product and the methods used for its assessment

#### 3.1. Product performance characteristic

**3.1.1. Characteristic and design load capacity.** Design load capacity of Sikla system components are given in Annex C. Design load capacity determined based on characteristic load capacity are given including safety factor 2,0

**3.1.2. Durability.** For components including zinc coatings with thicknesses not less than those given in Annex B, table B, ensure durability of the components to the extent specified in Section 2. For components made of aluminium and stainless steel, grade durability of material ensures durability of the components to the extent specified in Section 2

#### 3.2. Methods used to assess the performance

**3.2.1. Characteristic and design load capacity.** The characteristic load test is carried out in conditions corresponding to the service conditions applying the loads specified by the manufacturer. The test is carried out using two criteria: the ultimate limit state (destructive force) and additionally, in the case of covers, the serviceability limit state criterion (deformation not exceeding 2% of the diameter and not exceeding 1.5 mm, and the higher value is taken). Characteristic values are determined using the statistical method, assuming the 0,05 quantile of the normal distribution. To determine the design resistances, the characteristic values obtained from the tests (ultimate limit state criterion) must be divided by a safety factor as defined in point 3.1.1.

**3.2.2. Durability.** The zinc coating thickness test is performed according to PN-EN ISO 2808:2020 or PN-EN ISO 3497:2004.

### 4. Packing, transportation and storage, labelling of products

The products covered by this National Technical Assessment should be delivered in the manufacturer's original packaging and stored and transported in accordance with the manufacturer's instructions.

The method of marking products with the construction mark should be in accordance with the Regulation of the Minister of Infrastructure and Construction of 17 November 2016 on the method of declaring the performance of construction products and the method of marking them with the construction mark (Journal of Laws of 2023, Item 873).

The marking of the product with the construction mark shall be accompanied by following information:

- the last two digits of the year in which the construction mark was first affixed to the construction product,
- the name and registered address of the manufacturer or an identification mark enabling the name and registered address of the manufacturer to be unequivocally identified,
- name and designation of the construction product type,
- number and year of issue of the national technical assessment according to which the performance was declared (ITB-KOT-2023/2586 rev. 1),

- number of the national declaration of performance,
- the level or class of performance declared,
- the address of the manufacturer's website if the national declaration of performance is made available on it.

A safety data sheet and/or information on hazardous substances contained in a construction product, as referred to in Article 31 or 33 of Regulation (EC) No 1907/2006 of the European Parliament and of the Council concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH) and establishing a European Chemicals Agency, should be supplied or, where appropriate, made available together with the national declaration of performance.

Furthermore, the labelling of a construction product which is a hazardous mixture under the REACH Regulation should be in accordance with the requirements of Regulation (EC) No 1272/2008 of the European Parliament and of the Council on classification, labelling and packaging of substances and mixtures (CLP), amending and repealing Directives 67/548/EEC and 1999/45/EC, and amending Regulation (EC) No 1907/2006.

## **5. Assessment and verification of constancy of performance**

### **5.1. National system of assessment and verification of constancy of performance**

According to the Regulation of the Minister of Infrastructure and Construction of 17 November 2016 on the method of declaring the performance of construction products and the method of marking them with the construction mark (Journal of Laws of 2023, Item 873) system 3 of assessment and verification of constancy of performance shall be applied.

### **5.2. Type testing**

The performance characteristics assessed in point 3 shall be type-tested for products as long as there is no change in raw materials, components, production line or plant.

### **5.3. Factory production control**

The manufacturer shall have a factory production control system in place at the manufacturing site. All the elements, requirements and provisions adopted by the manufacturer shall be documented in a systematic manner in the form of policies and procedures, including records of testing. The factory production control shall be adapted to the production technology and shall ensure that the declared performance of the product is maintained in series production.

The factory production control shall include the specification and testing of raw materials and components, in-process inspection and testing (according to Section 5.4) carried out by the manufacturer in accordance with an established test plan and according to the rules and procedures laid down in the factory production control documentation.

The results of production control should be systematically recorded. The records of the register should confirm that the products meet the criteria for assessment and verification of constancy of

performance. Individual products or batches of products and related production details must be fully identifiable and reproducible.

#### **5.4. Follow-up tests**

##### **5.4.1. Testing plan.** The testing plan includes:

- a) ongoing testing,
- b) periodic testing.

##### **5.4.2. Ongoing testing.** Ongoing testing includes inspection of:

- shape and dimensions,
- zinc layer thickness for parts made of zinc coated steel.

##### **5.4.3. Periodic testing.** Periodic testing includes verification of lead capacity.

#### **5.5. Frequency of testing**

Ongoing tests should be carried out in accordance with an established test plan, but not less frequently than for each batch of products. The batch size shall be specified in the factory production control documentation. Periodic tests should be carried out at least once every 3 years.

### **6. Comments**

**6.1.** The National Technical Assessment ITB-KOT-2023/2586 rev. 1 is a positive assessment of the performance of those essential characteristics of the SIKLA system components which, in accordance with the intended use resulting from the provisions of the Assessment, affect the fulfilment of the basic requirements by the construction works in which the products will be used.

**6.2.** The National Technical Assessment ITB-KOT-2023/2586 rev. 1 is not a document authorising the marking of a construction product with a construction mark.

In accordance with the Act on construction products of 16 April 2004 (Journal of Laws of 2021, Item 1213) the products covered by this National Technical Assessment may be placed on the market or made available on the domestic market if the manufacturer has assessed and verified the constancy of performance, drawn up a national declaration of performance in accordance with the National Technical Assessment ITB-KOT-2023/2586 rev. 1 and labelled the products with the construction mark, in accordance with applicable regulations.

**6.3.** The National Technical Assessment ITB-KOT-2023/2586 rev. 1 does not infringe the rights arising from provisions on industrial property protection, in particular the Act of 30 June 2000. - Industrial Property Law (Journal of Laws of 2023, Item 1170). It is the responsibility of the users of this National Technical Assessment to ensure these rights.

**6.4.** By issuing a National Technical Assessment, the Building Research Institute is not responsible for any possible infringement of exclusive and acquired rights.

**6.5.** The National Technical Assessment does not relieve the product manufacturer of its responsibility for the correct quality of the products and building contractors of their responsibility for their correct application.

**6.6.** The validity of the National Technical Assessment may be renewed for further periods not exceeding 5 years.

## Annex D.

Material: PS

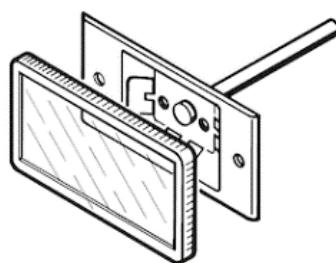

**Fig. D1.** Clear plastic cover SHA

Materials:

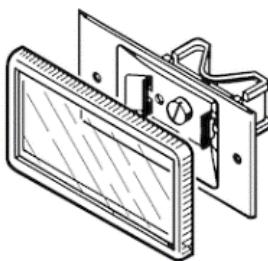

- a) carbon steel zinc coated ( $Zn \geq 8 \mu\text{m}$ ) – for screw holder SHT
- b) stainless steel – for screw holder SHT A2

**Fig. D2.** Screw holder SHT and SHT A2

Material: carbon steel zinc coated ( $Zn \geq 8 \mu\text{m}$ )

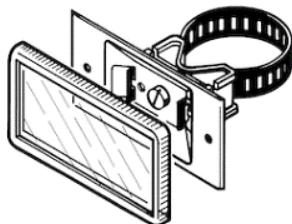

**Fig. D3.** Welding holder UNI

Material:

- a) carbon steel zinc coated ( $Zn \geq 8 \mu\text{m}$ ) - for UNI w/o fixing strap
- b) stainless steel – for UNI A2 w/o fixing strap

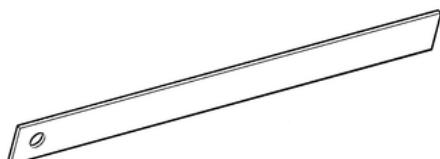

**Fig. D4.** Universal holder w/o fixing strap UNI and UNI A2

Material:

- a) carbon steel zinc coated ( $Zn \geq 8 \mu\text{m}$ ) - for UNI with fixing strap
- b) stainless steel – for UNI A2 with fixing strap

**Fig. D5.** Universal holder with fixing strap UNI and UNI A2

Material: carbon steel zinc coated ( $Zn \geq 8 \mu\text{m}$ )

Designation	Length [mm]	Hole diameter [mm]	Dimensions b x s [mm x mm]
SL 1	400	11	20 x 2,5
SL 2	400	13	30 x 2,5
SL 3	400	17	40 x 3,0
